Salesforce Certified AI Specialist	December 2024
Salesforce Certified Omnistudio Developer	April 2022
Salesforce Certified Platform Developer 1	March 2022
Salesforce Certified Administrator	February 2022
Bachelor of Science in Electrical & Computer Engineering, California Baptist University	November 2020

Experience

Salesforce Developer | Provisio Partners

February 2024 - Present

- Lead OmniStudio practices within the firm, serving as the company SME and implementing custom document generation, interfaces hosted on Experience Cloud sites, internal applications, and forms for multiple clients.
- Lead the adoption of Copado across the firm, establishing source-driven deployment practices and managing releases across project environments for reliable, repeatable delivery.
- Developed custom web services in Apex for seamless integrations between Salesforce environments and external databases, enabling bidirectional data exchange and streamlined data management.
- Contributed to 25+ projects across diverse engagement types, including full project lifecycles, on-demand error debugging, managed services support, and technical architecture design.
- Act as a technical resource for clients throughout project lifecycles, providing expertise on complex implementations including tax solutions, Experience Cloud deployments, and program eligibility systems.

Salesforce Developer | Revolent Group

January 2022 – 2023

- **Customer:** Cognizant
- Develop compelling user flows and elevate GUI experiences through OmniStudio development.

- Drive efficiency in a collaborative multi-disciplinary team setting by implementing Agile methodology, powered by JIRA.
- Participated in the full Software Development Life Cycle of three projects utilizing Financial Services Cloud, all of which included design, implementation, and delivery to the customer.
- Analyzed complex software system capabilities and demonstrated expertise in software integration and testing in order to troubleshoot various errors and bugs.
- Engineer Lightning Web Components (LWC) and microservices with Object oriented programming principles using Apex to tailor Salesforce solutions, addressing specific business and software architecture requirements.
- Worked in a fast-paced environment with high expectations, delivering high quality software products with no customer-requested actions.
- Spearheaded and directed a high-performing technical team of 1-5 members, showcasing strong leadership capabilities in technical decision-making, resulting in successful project execution and efficient team collaboration.

Software Developer | HCL Technologies

December 2020 – January 2022

- **Customer:** Google
- Innovate and sustain Python automation scripts for comprehensive device and application testing.
- Facilitate seamless communication across development and vendor teams to crystallize project requirements.
- Collaborate with engineering counterparts to formulate test cases covering both functional and regression aspects.
- Rigorously assess novel features across a diverse range of Android OS builds and devices to ensure robust testing outcomes.
- Collaborated with the BMW development team to leverage a test vehicle for comprehensive console and driving assessments.
